# ADEON Project

The ADEON program acquired long term measurements of the natural and human factors that describe the ecology and soundscape of the Mid- South-Atlantic Outer Continental Shelf.

Acoustic information was combined with contextual data from space-based remote sensing, hydrographic sensors, and mobile platforms to fully comprehend how human, biologic, and natural abiotic components create the soundscape and influence regional ecosystem dynamics.

# Achievements

- Standardized data products to be comparable with national and international acoustic programs
- Provides baseline measurements informing ecosystem-based management and a mechanistic understanding of cumulative impacts on marine resources
- Development of visualization tools to explore the ADEON data supports future data use beyond project completion
- Developed Artist at Sea program

## NOPP EXCELLENCE IN PARTNERING AWARD

The NOPP Excellence in Partnering Award is given annually to recognize superior collaborative efforts among partners in coordinating an exemplary NOPP project. In 2023, the ADEON project was bestowed with this honor due to its effective use of partnerships and considerable contribution to ocean science.
